Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Hajek et al specifically teach that the rimming or clumpings occurs in the cell suspension when cells are positive for an antigen. Applicant further asserts that one would not have been motivated to analyze a suspension of Hajek et al, instead of a smear, because Hajek et al teach that the suspension clumps. In addition, Applicant asserts that there is no expectation of success because one would expect that such clumping would interfere with visualizing cells.

Applicant's arguments set forth in paper No.21 have been considered but are not deemed to be persuasive for the following reasons:

The submission of the Declaration by Dr. Fodstad is acknowledged.

Although flow cytometry could not be used with the claimed method, from the teaching of Fodstad et al it is clear that cell suspension could be used for visualizing cells under microscope. Further, Hajek et al teach that cell agglutinations are an advantage, for providing a fast screening procedure for high WBC counts under appropriate conditions (column 12, lines 37-49). Hajek et al further teach that these phenomena have been observed with WBC cells in the order of 40-50,000 cells or greater per microliter as contrasted to normal WBC cell range of 4-11,000 cells per microliter. Thus it seems that cell clumping only occurs at high concentration of cells. One of ordinary skill in the art therefore would have been motivated to use cell suspension in the method of Hajek et al, as taught by Fodstad et al and Hajek et al, with an expectation of success, because using cell suspension or smearing for cell visualization under microscope are methods that are interchangeable, give the same results, and well known in the art.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

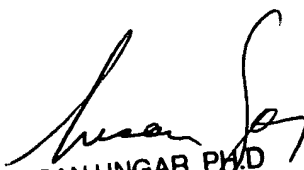

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
